

ANTI-PHISHING TRAINING SOFTWARE

Awareness training for prevention of phishing attacks with KnowBe4

Every day we learn how cybercriminals use the Web to target us. The increasing digitization of patient health records and under-funding of network security are putting healthcare organizations at risk. Western Healthcare Alliance (WHA) partners with KnowBe4 to provide the tools you need to prevent phishing attacks. KnowBe4's integrated platform is designed to help members manage the continuing problem of social engineering by providing awareness training.

In a recent survey study, 42% of companies reported they have experienced ransomware attacks. All of our organizations cope with the challenge of employees who are not always paying attention and therefore become the weak link in our IT security. KnowBe4 tests your users and your network with security tools that help you identify the problems of social engineering, spear-phishing and ransomware attacks.

With KnowBe4, you can deploy the best-in-class phishing platform combined with the world's largest library of security awareness training content; including 300+ interactive modules, videos, games, posters and newsletters. KnowBe4 has transformed how companies and organizations view the human factor in security training.

Friendly and intuitive, the KnowBe4 platform was built for busy IT leaders who have a lot on their plate and not always the time to train their organization on best practices in security.

Collaborating to Improve Community Healthcare

Baseline Testing. Providing baseline testing to assess the Phish-prone™ percentage of your users through a free simulated phishing attack.

Train Your Users. The world's largest library of security awareness training content; including interactive modules, videos, games, posters and newsletters. Automated training campaigns with scheduled reminder emails.

Phish Your Users. Best-in-class, fully automated simulated phishing attacks, hundreds of templates with unlimited usage, and community phishing templates.

See the Results. Enterprise-strength reporting, showing stats and graphs for both training and phishing, ready for management. Show the great ROI!

“*In our line of work, end users are THE threat when it comes to cybersecurity. We can put up all the walls ... but all it takes is one person to accidentally click something that is malicious and all our defenses no longer matter. KnowBe4 has allowed our organization to regularly campaign our users and help train them to be careful with emails, phone calls, and USB devices.*”

—Michelle Gelroth, IT Peer Network Chair
Director of Information Technology,
HIPAA Security Officer, Aspen Valley Hospital
