Online security that is easy to implement and cost effective

We are well aware that cybercriminals use the Web to target your facility and your community. The increasing digitization of patient health records and under-funding of network security are putting healthcare organizations at risk. Western Healthcare Alliance (WHA) is dedicated to ensuring you are protected and saving money.

WHA has partnered with EPC USA and FireEye, experts who have front line experience analyzing environments for everyday threats and battling breaches that might otherwise make headlines.

The FireEye Network is designed to stop drive-by downloads and blended Web and email attacks. It also offers a defense against infections that take place outside the network. With a continuous monitoring service, they proactively hunt for threats in your environment and instantly help respond to incidents. Their products and services include a state-of-the-art virtual machine technology that responds to threats in real time.

Real-time threat prevention

According to Inc. Magazine, FireEye is, "...the go-to company whenever there's a huge data breach by hackers, for its expertise in forensic sleuthing deep into compromised computer networks. In recent years, JP Morgan Chase, Sony Pictures, and the health insurer Anthem have all turned to FireEye, the Milpitas, California company, for help."

The FireEye Network will:

▸ Deploy in-line (block/monitor mode) or out-of-band (TCP reset mode/monitor mode) and enable security analysis for IPv6 traffic.

▸ Analyze all suspicious Web objects.

▸ Integrate with the FireEye Threat Prevention Platform to stop blended spear-phishing attacks.

▸ Distribute threat intelligence locally and globally through the FireEye Dynamic Threat Intelligence cloud.

▸ Support remote third-party AAA network service access in addition to local authentication.

▸ Provide role-based access control and audit logging.

▸ Consolidate signature-based and signature-less technologies with the IPS add-on license to FireEye Network to automatically reduce false alerts and drive down operational spend.
