Instantly Monitor the Cybersecurity Health of Your Vendors and Other Partners

While the overall security profile of the healthcare industry has improved over the last year, we're still not without threats. To effectively combat risk, you must have continuous visibility into your ecosystem's cybersecurity posture. Through a new relationship with EPC USA and SecurityScorecard, you now have help to manage this burden.

SecurityScorecard provides the most accurate rating of security risk for any organization worldwide. The platform uses non-intrusive proprietary data collection methods and trusted commercial and open-source threat feeds to quantitatively evaluate the cybersecurity posture of more than one million enterprises globally.

Predictive Capabilities. SecurityScorecard offers critical data points through its proprietary factors analysis. Risk factors range from Network Security to Application Security. Each factor is predictive: for example, companies with a C, D, or F rating are up to five times more likely to experience a data breach or face compliance penalties than those with an A or B rating. Good grades make a difference.

Improve Your Ability to Meet HIPAA and other Compliance Challenges. In order to facilitate an effective security and compliance program, organizations must continually monitor their cybersecurity posture and that of any third party. SecurityScorecard enables organizations to meet or exceed regulation mandates regarding continuous monitoring while simplifying the compliance process.

Powerful Threat Reconnaissance. SecurityScorecard's unmatched threat intelligence capabilities and attribution engine combine to deliver actionable cybersecurity intelligence that enables the reduction of exploitable vulnerabilities. Threat reconnaissance answers the questions: what assets are at risk, and what entity do they belong to?

By leveraging SecurityScorecard's proprietary collection capabilities and utilizing commercial and open source threat intelligence feeds, you can now identify vulnerable assets in your ecosystem to proactively eliminate weaknesses and defeat threats.

Implement Immediately. SecurityScorecard is easy to implement and immediately usable.

Complete Visibility into Third-party Risk

- Continuously monitor the cybersecurity health of your vendors today.

- Identify the security profile of all of your vendors and business partners.

- Leverage the breadth of data across 10 risk factor groups.

- Clearly understand cybersecurity posture.

- Send and manage security questionnaires to your vendors and automatically validate them against industry best practices and compliance frameworks.

Reach out today to see how EPC USA and SecurityScorecard can help you minimize your risk.
