

EASIER. FASTER. COMPLIANT.

We know you would rather spend more time providing care for your patients than documenting it. Finding cost-effective rehabilitation EMR software that is all encompassing can be overwhelming.

Western Healthcare Alliance (WHA) partners with Cedaron to bring members a powerful solution that can help you increase departmental productivity, incur decreased denials, reduce staff overtime, and provide care to more patients.

Meet CONNECT Rehabilitation EMR Software

CONNECT Works With Any EHR, Even Epic

EHRs are great for overall patient care, but they aren't suited for the uniquely complex documentation requirements of rehabilitation therapy. Flowsheets and free-text fields don't capture things like mandatory calculations and modifiers, and they are difficult to report on. CONNECT fills that gap and takes on the mental load of charting and coding so therapists can focus on patient care.

CONNECT Pays for Itself

It's not uncommon for therapy and billing to operate independently of each other, with the billing team handling the claims part of patient documentation. When there's a disconnect between the clinic and billing office there's an increased risk of revenue leaking due to unbilled – or unbillable – procedures. CONNECT pays for itself, starting with increased reimbursement. Because automated compliance is at the heart of CONNECT, even cumbersome Medicare claims are 100% defensible during an audit.

Average Customer-reported CONNECT ROI

Featuring an ROI calculator to help you prepare a revenue/cost analysis of the current and future state. The calculator is based on quantifiable, customer-reported results.

23% average
decrease in administrative
overhead

12% average
increase in therapist productivity,
reducing overtime

84% average
reduction in denied claims

CONNECT Telehealth Facilitates Patient Follow Through in Rural Communities

We know that physical therapy is a proven intervention for pain management and helps reduce the occurrence of opioid addiction. Likewise, patient follow through improves scores on quality outcomes and post-op surveys. CONNECT Telehealth removes the geographical barrier so that patients can continue their plan of care, even if they can't make it to the clinic.

CONNECT Telehealth, unlike many teleconferencing tools, is integrated with therapist workflows. The patient/provider experience is so simple that they're able to focus on connecting personally and moving forward with therapy goals at home.
